

Acceptance Testing

UAT Execution & Report Submission

Date	30 September 2026
Team ID	SWTID-2026-4452
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	4 Marks

1. Purpose of Document

This document summarizes the documented acceptance-test coverage and open issues for the Import Data using Transform Maps (Spreadsheet) project. The project imports structured employee data from an external spreadsheet into ServiceNow using Import Sets and Transform Maps, validates the transformed records, applies Coalesce to prevent duplicates, and provides reports and a dashboard.

2. Defect Analysis

The supplied project documentation does not record any defects, severity classifications, or unresolved bugs. Therefore, no defect counts are fabricated for this report.

Resolution	Severity 1	Severity 2	Severity 3	Severity 4	Subtotal
Documented defects	0	0	0	0	0

3. Test Case Analysis

The following cases are adapted from the documented project workflow and validation results. The source documentation records successful completion for the listed activities.

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC-001	Spreadsheet Import Set Loading	Open Load Data, select the employee spreadsheet, use sheet 1 and header row 1, then submit.	Employee Import staging table loads successfully and reaches Completed/Success.	The source project records the import as Completed and Success.	Pass
TC-002	Transform Map Field Mapping	Create/open the Transform Map, select Employee Import as source and Employee Test as target, and map the required fields.	Source fields map correctly to Employee Test target fields.	The project records successful source-to-target field mapping and saving of the Transform Map.	Pass
TC-003	Data Transformation	Run the Transform for the imported employee data.	Transformation completes successfully and records are created in Employee Test.	The project records successful transformation and imported records in Employee Test.	Pass
TC-004	Coalesce Duplicate Prevention	Enable Coalesce on Employee ID and import data containing existing and new employee IDs.	Existing IDs are updated rather than duplicated; new IDs are inserted.	The documented result was 2 inserted new IDs and 2 updated existing records.	Pass
TC-005	Repeat Import Handling	Upload the same spreadsheet again through the same Import Set and Transform Map.	Previously processed records are not duplicated or unnecessarily updated.	The documented second run reported 0 inserted, 0 updated and 4 ignored rows.	Pass
TC-006	Report Generation	Create Employees by Department, Employees by Location and Employee List reports.	Reports execute successfully and display employee data in the configured formats.	The project documents creation and execution of all three reports.	Pass
TC-007	Dashboard Validation	Create Employee Analytics Dashboards and add the three reports.	Dashboard contains the configured reports and provides centralized employee-data visibility.	The project documents successful addition of all three reports to the dashboard.	Pass

Test Case Summary

Section	Total Cases	Not Tested	Fail	Pass
ServiceNow Employee Data Import & Reporting	7	0	0	7

Source note: The report is based on the supplied project documentation. No separate UAT execution log, defect tracker, tester names, signatures, or application URL was provided.
