Date: 30 September 2026

Project: Import Data using Transform Maps

	ENTICE / PREPARE Phase 1 & 2: Prep & Table Creation	ENTER / LOAD Phase 3 & 4: Staging & Mapping	ENGAGE / TRANSFORM Phase 5 & 6: Import & Coalesce	EXIT / VALIDATE Phase 7: Re-import & Duplicate Avoidance	EXTEND / ANALYZE Phase 8 & 9: Reports & Dashboards
STEPS What does the user execute at each stage?	1. Sheet & Table Setup - Create Google Sheet with sample employee data (SB-0001 to SB-0015). - Download as Sample Spreadsheet.xlsx. - Navigate to Tables > Create New (Label: Employee Test, Name: u_employee_test). - Configure Form Layout to add string fields: Employee ID, Name, Email, Department, Location.	2. Load Data & Map - Open System Import Sets > Load Data. - Create staging table u_employee_import and upload Excel file. - Click 'Create Transform Map' (Name: Sample Spreadsheet Import). - Set Target Table: Employee Test. - Use Mapping Assist / Auto Map Matching Fields to link source and target fields.	3. Transform & Coalesce - Execute initial Transformation process. - Verify 15 inserted records in u_employee_test table. - Enable Coalesce = True on Employee ID (u_employee_id) in Field Maps. - Save Transform Map configuration to prevent duplicate record creation.	4. Re-Import & Test - Prepare updated Excel file with 4 records (2 modified existing, 2 new IDs: SB-0016, SB-0017). - Load Data into existing u_employee_import table. - Run Transform and check Transform History. - Verify results: 2 Inserted, 2 Updated, 0 Duplicates. - Re-upload same sheet: Verify 4 Ignored records.	5. Analytics & Dashboard - Navigate to Usage & Governance > Reports. - Create Report 1: Employees by Department (Pie Chart). - Create Report 2: Employees by Location (Bar Chart). - Create Report 3: Employee List Report (List View). - Configure ACL pa_dashboards to enable dashboard creation. - Build 'Employee Analytics Dashboard' and embed all 3 reports.
INTERACTIONS Touchpoints, Environments & Tools	Things: Google Sheets, Excel (.xlsx), ServiceNow Studio. Places: System Definition > Tables form context menu. People: Developer / System Administrator.	Things: Import Set Staging Table, File Uploader. Places: System Import Sets > Load Data & Mapping Assist utility. People: ServiceNow Data Admin.	Things: Coalesce Configuration Engine, Field Maps list. Places: Table Transform Map form (u_employee_import -> u_employee_test). People: Technical Lead / Admin.	Things: Transform History Logs, Execution Progress bar. Places: Application Navigator > Employee Tests target table. People: Data Auditor / Developer.	Things: Platform Analytics, Interactive Widgets, ACL Security Admin. Places: PA_DASHBOARDS form & Dashboards canvas. People: HR Team, Management, Admin.
GOALS & MOTIVATIONS Primary objective at each step	"Help me structure raw employee data and build the destination schema in ServiceNow accurately so data has a proper target."	"Help me safely stage raw spreadsheet records and establish robust field-level mapping rules between source and target."	"Help me execute the transformation seamlessly and configure unique key match rules to prevent data duplication."	"Help me validate that system updates existing records while adding new ones without creating redundant entries."	"Help me visualize key metrics and provide management with real-time operational insights via a unified dashboard."
POSITIVE MOMENTS Enjoyable, smooth, or rewarding steps	Clean Schema Setup Form Layout Builder makes custom field creation quick and visual.	Auto Mapping Auto Map Matching Fields automatically maps matching column names instantly.	Coalesce Control Simple toggle on Employee ID turns staging load into smart upsert engine.	Data Accuracy Transform history clearly breaks down Inserts (2), Updates (2), and Ignored (4).	Rich Visuals Drag-and-drop dashboard widgets offer immediate visual reporting for department breakdown.

	ENTICE / PREPARE Phase 1 & 2: Prep & Table Creation	ENTER / LOAD Phase 3 & 4: Staging & Mapping	ENGAGE / TRANSFORM Phase 5 & 6: Import & Coalesce	EXIT / VALIDATE Phase 7: Re-import & Duplicate Avoidance	EXTEND / ANALYZE Phase 8 & 9: Reports & Dashboards
NEGATIVE MOMENTS Challenges, errors, or complexity	Manual Field Entry • Creating fields one-by-one in form layout can be repetitive.	Staging Confusion • First-time users may confuse staging table (u_employee_import) with target table.	Duplicate Risk • Without Coalesce set to True initially, re-importing creates duplicate employee records.	Formatting Checks • Ensuring exact field header matches in Excel to prevent unmapped fields.	ACL Permissions • Creating dashboards directly requires overriding ACL settings (pa_dashboards) for Admin.
AREAS OF OPPORTUNITY Ideas for automation & enhancement	Automate Schema • Auto-generate target table fields directly from Excel header definitions.	Scheduled Imports • Configure Scheduled Data Import via SFTP/Email attachments for automated batching.	Multi-Column Coalesce • Use combination Coalesce (e.g. Employee ID + Email) for complex record matching.	Transform Scripts • Add OnBefore transform scripts to clean data, validate emails, and format phone numbers.	Interactive Filters • Add dynamic interactive dashboard filters for interactive real-time department slicing.
