Project Design Phase

Problem - Solution Fit Template

The Problem-Solution Fit simply means that you have found a problem with your customer and that the solution you have realized for it actually solves the customer's problem. It helps entrepreneurs, marketers and corporate innovators identify behavioral patterns and recognize what would work and why.

Purpose:

- ☐ Solve complex problems in a way that fits the state of your customers.
- ☐ Succeed faster and increase your solution adoption by tapping into existing mediums and channels of behavior.
- ☐ Sharpen your communication and marketing strategy with the right triggers and messaging.
- ☐ Increase touch-points with your company by finding the right problem-behavior fit and building trust by solving frequent annoyances, or urgent or costly problems.
- ☐ Understand the existing situation in order to improve it for your target group.

Template:

1. CUSTOMER SEGMENT(S) [CS] • IT Administrators & ServiceNow System Engineers managing employee data imports. • HR & Operations Teams requiring seamless automated data onboarding. • Enterprise System Integrators dealing with legacy Excel/Spreadsheet data migration.	6. CUSTOMER CONSTRAINTS [CC] • Legacy systems output data in fixed spreadsheet formats (e.g., Sample Spreadsheet.xlsx). • Limited manual bandwidth for data entry. • Strict schema rules in ServiceNow (staging tables & target table mapping requirements).	5. AVAILABLE SOLUTIONS [AS] • Manual data entry into ServiceNow forms (slow, prone to human error). • Direct DB access / Custom API integrations (expensive, complex setup). • Out-of-the-box ServiceNow Load Data & Import Set functionality.
2. JOBS-TO-BE-DONE / PROBLEMS [JBP] • Need to import employee data reliably via Load Data in Application Navigator. • Create staging tables ('Employee Import' / 'u_employee_import'). • Map imported staging data to target tables via Transform Maps. • Verify success and log execution progress.	9. PROBLEM ROOT CAUSE [RC] • Unstructured or non-standardized raw input files (Sample Spreadsheet.xlsx). • Lack of automated field mapping between source files and target ServiceNow user tables. • High risk of staging table mismatches if transform rules are not correctly configured.	7. BEHAVIOUR [BE] • Users navigate to Load Data under System Import Sets. • Specify import set table details (Label: Employee Import, Name: u_employee_import). • Choose file source, select file, and click Submit. • Click 'Create Transform Map' upon completion message.
3. TRIGGERS [TR]	10. YOUR SOLUTION [SL]	8. CHANNELS OF BEHAVIOUR

• Onboarding new employee batches or scheduled bulk data synchronization. • Receipt of updated employee data spreadsheets. • Need for error-free staging and completion status verification.	• Phase 3: Import Set Table Creation via Application Navigator -> Load Data. - Label: Employee Import Name: u_employee_import (auto-populated). - Source: File Choose file: Sample Spreadsheet.xlsx Sheet/Header row: 1. • Phase 4: Create & Execute Transform Map. - Name: Sample Spreadsheet Import Source Table: Employee Import. - Execute transformation to populate target tables accurately.	[CH] 8.1 ONLINE: • ServiceNow Web Platform / Studio Interface. • Application Navigator (System Import Sets -> Load Data). 8.2 OFFLINE / SYSTEM: • Pre-formatted Excel spreadsheets (Sample Spreadsheet.xlsx). • Exported CSV/XLSX data files from legacy HR systems.
4. EMOTIONS: BEFORE / AFTER [EM] • BEFORE: Frustrated with manual data ingestion, worried about missing employee records or field mapping errors. • AFTER: Confident and satisfied with automated import set processing, clear success status logs, and error-free transform maps.
