Team ID	SWTID-2026-4452
Project Name	ServiceNow Integration & Automated Import Staging (E-Commerce Bot / Employee Import)
Maximum Marks	2 Marks

Project Design Phase - Proposed Solution Template

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Manual ingestion of employee datasets in enterprise ServiceNow workflows (Global Update Set / E-Commerce Bot) causes human error, delays, and structural inconsistencies due to lack of standard staging validation.
2.	Idea / Solution description	- Phase 3 (Import Set Table): Load Data via Application Navigator → create staging table `u_employee_import` (Label: 'Employee Import') using `Sample Spreadsheet.xlsx`. - Phase 4 (Create Transform Map): Create transform map `Sample Spreadsheet Import` to cleanly validate and map staging data to target system tables.
3.	Novelty / Uniqueness	- Staging Isolation: Prevents database corruption by staging raw records before commit. - Native Integration: Direct compatibility with ServiceNow Studio & E-Commerce Bot tools. - Reusable Mapping: Automated, repetitive spreadsheet transformation via saved maps.
4.	Social Impact / Customer Satisfaction	- Eliminates manual data entry errors for higher systemic reliability. - Reduces IT administrative workload and drastically speeds up bulk employee onboarding.
5.	Business Model (Revenue Model)	Enterprise SaaS integration module / managed deployment model on ServiceNow Store based on automated processing throughput and custom workflow mapping tiers.
6.	Scalability of the Solution	Built on ServiceNow cloud architecture; seamlessly scales across high-volume records and easily extends to other datasets (Inventory, User Access, E-Commerce logs).
