Empathize & Discover — Empathy Map Canvas

Date	30 September 2026
Team ID	SWTID-2026-4452
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	4 Marks

Target user: Administrator / HR team member responsible for maintaining employee records and monitoring import results.

THINKS & FEELS Needs accurate employee data migration; wants confidence that records are correct; is concerned about duplicate records during repeated imports.	SEES Excel employee spreadsheets, ServiceNow Import Set records, Employee Test records, transform status, reports, and the Employee Analytics Dashboard.
HEARS Import success/completion status and validation results; information about inserted, updated, or ignored rows.	SAYS & DOES Prepares spreadsheets, loads data, configures field mappings, runs transforms, enables Coalesce, checks transform history, creates reports, and adds reports to the dashboard.
PAINS Manual migration can be error-prone; repeated imports can create duplicates without Coalesce; checking employee data across separate views can require extra effort.	GAINS Accurate imported records, duplicate prevention, clear transform results, department/location reports, and centralized dashboard visibility.

Note: The empathy map is derived from the roles, workflow, and outcomes explicitly described in the supplied project document; the source does not provide interview transcripts or direct user quotes.
