

Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Date	30 September 2026
Team ID	SWTID-2026-4452
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements derived from the supplied project workflow.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Spreadsheet Data Preparation	Create sample employee data in a spreadsheet and download it as an Excel (.xlsx) file.
FR-2	Import Set Loading	Load the Excel file through ServiceNow Load Data into the Employee Import staging table.
FR-3	Transform Map Configuration	Create the Sample Spreadsheet Import Transform Map and map source fields to the Employee Test target fields.
FR-4	Transform & Validation	Execute the transformation, verify successful import, and validate records in the Employee Test table.
FR-5	Duplicate Prevention	Enable Coalesce on an employee identifier so repeated imports update existing records rather than creating duplicates.
FR-6	Reports & Dashboard	Create employee reports and add them to the Employee Analytics Dashboard for centralized monitoring.

Non-functional Requirements:

The project source supports the following characteristics; where a specific implementation is not described, it is marked accordingly.

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	The workflow provides clear stages for loading, mapping, transforming, validating, reporting, and dashboard viewing.
NFR-2	Security	Specific encryption, IAM, firewall, or OWASP controls are not specified in the source document.
NFR-3	Reliability	Coalesce helps maintain consistent employee records by preventing duplicate insertion and updating matching records.
NFR-4	Performance	The solution is intended for efficient bulk employee-data migration; specific performance measurements are not specified.
NFR-5	Availability	Specific high-availability or distributed-server configuration is not specified.
NFR-6	Scalability	The source demonstrates repeated/bulk spreadsheet imports and centralized reporting, but does not specify a formal scalable architecture.
